Abstract: There exists the problem in teaching plane composition that students have difficulty in grasping abstract forms. To solve it, we must first of all help students discover aesthetic forms in nature and explore the relationship between the forms of points, lines and planes and human psychological experience, and then train their ability to select and refine nature forms, bring association and imagination into play, and make composition and reproduction, so as to form a complete process of grasping abstract forms.

Key words: abstract form; natural appearance; teaching method of plane composition
